

It's Cold and Flu Season Again!

What are you doing for Prevention?

Many people are not convinced of the efficacy of the flu shot but are still concerned about the coming flu season.

The well-researched German homeopathic combination Pascoeleucyn provides a safe and effective alternative to the flu shot.

It can be delivered by a regular injection or orally. This injection increases the body's natural defenses in the prevention and

treatment of acute febrile infections.

For the past 7 years, Telus Canada has offered this same program to its employees across Canada as a viable alternative to the flu shots...with great results.

Take home some ideas for flu prevention and treatment for the whole family.

The Alternative Flu Shot is Available:

1. Anytime at the clinic – schedule with Jill and Teresa
2. At a Special Flu Shot Clinic at The Vitamin Store on Saturday Nov 12 (call 690-8383 to register)

Please note: the use of Pascoeleucyn is contraindicated in autoimmune disease.
